

**'Tamper Evident'  
doping control  
solutions for  
cleaner sports.**

## Secure doping control solutions from **Versapak** - better for athletes, doping control officers and sample collection authorities.

Sportsmen and women know that their reputation is critical - so they welcome any improvements in the fight against doping in sports. Versapak's doping control solutions are 'Tamper Evident', as assessed by an independent testing authority:

*"it was not possible to open the canisters without evidence of tampering."*

Our bottles are made from tough, lightweight material, so that it is easy to detect tampering, and they are a cost-effective solution. Our system uses a single-use locking canister, which only requires minimal force to close. And it's also much safer for laboratory staff to open and handle.

We supply an opening tool, which is easy to use, with little effort or leverage needed.

You can find out more about our full range at [www.versapak-anti-doping.com](http://www.versapak-anti-doping.com) or call our sales team on **+44(0) 20 83 33 53 20**.

Here at **Versapak**, we have completely redesigned our 'Tamper Evident' sample collection kits. Our patented once-only closures are simplicity itself - you just click them into place to form a 'Tamper Evident' shell. It's not possible to open and reveal the canister without any evidence of tampering.

All parts are coded with 'Tamper Evident' identification labels, so they cannot be removed or altered.

We believe that the scientists and technicians who carry out testing are playing a vital role in the fight to keep sport clean. We have developed our kits to make them safer and easier to use.

Versapak sample collection kits open with little effort and minimal shattered pieces. This not only protects laboratory staff, but reduces the chance of contamination.

Our kits have been independently tested by a reputable worldwide authority.

# Versapak doping control solutions:

All Versapak doping control transport kits conform to ISTI requirements, and have these security features:

- 3-part system, locking 'Tamper Evident' security
- Once-only locking mechanism
- 'Tamper Evident' URN label on all parts
- Transparent canister, which means the sample is visible at all times
- Portable and easy to use opening tool available
- Kits open with little effort and minimal shattered pieces
- Lightweight and recyclable

## Urine sample kits:

### Urine Transport Kit for A/B Samples (DTC 3)

### Single Urine Transport Kit for Partial Samples (BPK 3)

### Urine Collection Vessel (UCV)
